

Rockstone Historic Diamond Drill Results

Five recent historic diamond drill holes completed on Rockstone Project (GC-12-01, RS-22-01, RS-22-02, RS-22-03, and RS-22-04, totalling approximately 900 meters) confirm presence of appreciable quantities of graphite as intersected in discovery diamond drill DDH-GC-12-01, which returns 25% graphite over 24 meters. Northern extensions of the graphite deposit are encountered in subsequent diamond drill holes as follows:

RS-22-01, RS-22-03 and RS-22-04 all return elevated carbon as graphite (Cg) and zinc.

DDH-RS-22-01 intersects 15.68 percent graphite and 0.56 percent zinc over 4.83 meters, including 24.05 percent graphite and 0.72 percent zinc over 2.33 meters.

DDH-RS-22-03 intersects 1.87 percent graphite with 0.06 percent zinc over 16.45 meters, and 3.36 percent graphite with 0.13 percent zinc over 101 meters, including 21.96 percent graphite and 0.78 percent zinc over 4.32 meters.

Hole RS-22-04 intersects 10.86 percent graphite and 0.42 per cent zinc over 14 meters, including 17.94 percent graphite and 0.6 percent zinc over 7.0 meters.

Hole RS-22-02 intersects an unexpected **1.7 grams per tonne (g/t) gold (Au) over two meters** from 198 meters to 200 meters The drill hole did not intersect significant graphite or zinc mineralization.

The table below shows drilling program highlights.

Table 1: Drill Program Highlights

Drillhole	From (m)	To (m)	Interval (m)	Cg (%)	Zn (%)
RS-22-01	68.17	73.0	4.83	15.68	0.56
including	68.17	70.5	2.33	24.05	0.72
RS-22-03	45.0	61.45	16.45	1.87	0.06
and	80.0	181.0	101.0	3.36	0.13
including	106.0	177.26	71.26	4.67	0.17
including	139.12	143.44	4.32	21.96	0.78
RS-22-04	84.0	98.0	14.0	10.86	0.42
including	89.0	96.0	7.0	17.94	0.60
